*ν*RAD RESULTS

Radiology Results for the Entire Patient Care Team. Anytime. Anywhere.

Physicians need fast radiology results so they can provide precise, timely patient care. When they have questions about radiology reports, they need easy, on-demand access to reading radiologists and relevant images.

They need *ν*Rad® Results℠ – a secure, cloud communication tool that improves access to radiology results – and ultimately patient care.

Instant Internet access to images, reports and radiologists – Ordering physicians or any member of the patient care team can securely access full DICOM, non-diagnostic image sets and radiology reports from any Internet-accessible computer using *ν*Rad Results. Clients using our *ν*Rad Vault storage solution can even access non-diagnostic images directly from the patient record in their EMR system.

With a single click, they can also initiate a live consultation with the *ν*Rad radiologist.

Compliance and reporting – Critical-finding response times are time-stamped and reportable, supporting your organization's efforts to meet Joint Commission National Patient Safety Goals and other initiatives. Access to *ν*Rad Results is secured with "break-the-glass" authorization (temporary emergency access to patient information for practitioners who otherwise lack access rights).

It Works for Us; Let It Work for You.

In our own national practice, *ν*Rad efficiently manages, reads and stores over 6 million patient studies annually and processes 2.1 billion images on the world's largest and most advanced PACS. Clients can now use *ν*Rad Results and many other *ν*Rad patented technology solutions to increase productivity, enhance patient care and reduce expenses.

*ν*Rad Snapshot
