

## vRAD VAULT

### Reduce Costs and Increase Security with Innovative Cloud Image Storage

The tidal wave of images can be overwhelming to your hospital or radiology practice. Government and legal regulations – and common sense – dictate that you store patient images for the legal life of the study. But where and at what cost? You need tools to help you work smarter and faster, without significant capital investment.

Good news. vRad<sup>®</sup> Vault<sup>SM</sup> is your smarter, faster and less costly solution.

vRad Vault provides scalable primary and secondary/disaster recovery image storage with significant savings over traditional onsite options.

#### With vRad Vault, You Get:

- **Cost savings** – As a cloud solution, hosted and managed by vRad, vRad Vault eliminates the need for costly onsite storage hardware. No more annual service fees – and your expenditures are aligned with your revenue stream. Instead of significant up-front capital investment, you pay a onetime fee for the legal life of the study to be stored.
- **Long-term storage and access** – vRad Vault doesn't fill up, doesn't break down and is always available. vRad Vault is a secure primary and secondary/disaster recovery image storage solution that can be seamlessly integrated into your existing storage strategy. Ordering physicians or any member of the patient care team can securely access full DICOM, non-diagnostic image sets and radiology reports from any Internet-accessible computer using vRad Results – or launch non-diagnostic images directly from the patient record in the EMR system.
- **Reliability and security** – You can count on vRad Vault with a targeted 99.9 percent image availability up-time. For your security, multiple copies of images are stored in multiple systems within vRad Vault. The security of your data is further bolstered by the high levels of physical and network security, redundant power and environmental conditioning of vRad's U.S.-based world-class data centers.
- **Flexibility for the future** – You can easily migrate the data in your existing systems to vRad Vault at a very low cost thanks to our data migration solution. Should you ever want your data back from vRad Vault, all of your archived data can be retrieved in a DICOM-compatible format at no additional cost.

#### It Works for Us; Let It Work for You.

In our own national practice, vRad efficiently manages, reads and stores more than 6 million patient studies annually and processes 2.1 billion images on the world's largest and most advanced PACS. vRad technologies help more than 500 vRad radiologists read more productively and deliver 99.7% accuracy for 2,100 hospital, health system and radiology group facilities. When you make the decision to implement vRad Vault, our customer support team will ensure a seamless integration into your radiology operations. As a vRad client you get unparalleled client service and technical assistance from our 24/7 U.S.-based operations center.
